Understanding oi and oy Words

Understanding oi and oy words is fundamental to phonics instruction because these vowel digraphs represent the same diphthong sound but appear in different positions within words. The "oi" sound typically occurs in the middle of words, while "oy" usually appears at the end. Recognizing this pattern aids learners in decoding and spelling words accurately. Examples of oi words include "coin," "boil," and "noise," whereas oy words include "toy," "joy," and "boy."

Phonetic Features of oi and oy

The "oi" and "oy" vowel digraphs produce the diphthong /ɔɪ/, a combination of two vowel sounds pronounced as a glide from the "aw" sound to the "ee" sound. This phonetic feature distinguishes these words from others with single vowel sounds. Teaching students to identify this sound helps in developing their phonemic awareness and decoding skills.
